

Wine-Mate 8500HZD-DE Self-Contained Exhaust Ducted Cooling System

The Wine-Mate 8500HZD-DE is a partially ductable version of our popular HZD stand alone cooling system. This cooling unit is designed to provide a stable temperature up to 50~65 °F - perfect for long term wine storage. By upgrading the fan and ducting this unit, the main cooling system and control panel remain in your wine room, but your hot condenser exhaust air can be exhausted up to 25 feet away to another room or to the outside. The humidity range of the refrigerated space can be maintained within 50~75%.

Purchase our optional duct kit pieces to duct your 8500HZD-DE or use your own. Duct kit not included.

Key Features

- Adjustable temperature control between 50~65°F
- Upgraded fan system for ducted air dispersal
- Four high speed fans for air efficiency
- Oversized and bottom feeding evaporator for humidity maintenance
- Ductable cooling unit (Duct kit sold separately)
- This unit can vent outdoors
- Removable grill for easy cleaning
- Long-lasting, reliable and manufactured to the highest quality standards
