The Vinotemp Stainless Steel Wine & Beverage Cooler stylishly and conveniently stores up to 108 bottles of wine and 100 cans.

Vinotemp's New Wine and Beverage Cooler Provides Ample Storage with Style

Henderson, NV - Vinotemp®, the leading wine storage solutions and appliance provider, today announced the addition of the Stainless Steel Wine & Beverage Cooler to its **Connoisseur Series**. As the latest offering in the series - dedicated to providing sophisticated storage at the perfect price point - the cooler's visual aesthetic is as notable as its functionality because it features elegant storage for over nine cases of wine along with ample beverage storage in easy-to-access refrigerated drawers.

"We were meticulous in the designing of our latest wine and beverage storage solution because we wanted to offer a sleek, clean, modern look while providing extensive storage and accessibility," states India Hynes, CEO of Vinotemp. "And the new Stainless Steel Wine & Beverage Cooler delivers it all, along with the option of built-in or freestanding installation."

Featuring gliding metal wine racks with an elegant wood lip, and the option of a left or right hinge, the **Stainless Steel Wine & Beverage Cooler** also includes:

- Impressive storage capacity.

Approximately 108 standard-sized bottles of wine can be stored, and the drawers combined storage capacity is approximately 100 cans.

- Easy, and easy-to-adjust, beverage storage and access.

The cooler's wine zone features ten slide-out shelves allowing bottles to be easily viewed and removed. And a shelf, or shelves, can be removed to create room for storing large format bottles. The beverage zone features two, convenient pull-out refrigerated drawers with ample room for storage.

- Customizable storage temperatures.

A digital temperature control panel makes customizing the temperature of the two-zones simple.

- The wine zone features a 31-degree temperature range (41°-72°F) to ensure the optimal drinking temperature for a variety of wines from vintage sparkling (recommended optimal drinking temperature, 48°F) to full bodied reds (recommended optimal drinking temperature, 64°F).
- The drawers are configured with a temperature range of 34°- 46°F to properly refrigerate everything from black ales and premium lagers to dairy.

The Vinotemp Stainless Steel Wine & Beverage Cooler has gliding metal wine racks with an elegant wood lip, and the option of a left or right hinge.
